

**MOPA**  
dekorpanel

## Interiors in a new dimension

**MOPA DECOR PANELS** are unique and rich in shape variety, it has elegant structure and creative surface. They provide a modern and versatile use, any room can be transformed spectacularly with them almost immediately.

Entire wall surfaces can be covered, but even a few pieces can be enough to create a unique and special interior. Different panel forms and colors can be combined, therefore the variational options are endless.

The panels are not only showy but practical as they are easy to clean, have thermal and sound proof properties, furthermore they are soft and non-deformable due to the memory foam. It doesn't require any further maintenances, no need to priming and painting, unlike gypsum panels. Immediately gives the room a perfect and warm feel.

Choose any variation: **THE RESULT WILL BE IMPRESSIVE!**

# Decor panel material and structure

The **MOPA DECOR PANEL** made by high density foam and it has a high quality textile leather cover. The structural frame of the panel is a micro bubble memory foam enriched with bamboo fiber. The micro bubbles ensure the sound and heat insulation properties of the product.

The memory foam frame got a special - to the touch similar to leather - PU decorative leather covering, which is much softer than other textile leather and it has higher abrasion resistance too. The speciality of the covering is that it's waterproof and breathable at the same time. Not only the top cover of the panel, but also the bottom part has a barrier layer to ensure that it doesn't absorb moisture.

The product is light, flexible and easy to install. It's easy to cut, even with a knife.

- 
**WATER AND MOISTURE PROOF**  
 Because of the excellent pu leather on the back and the bamboo charcoal fiber in the foam, it makes the panels waterproof and moistureproof.
- 
**THERMAL INSULATION**  
 The memory foam enriched with bamboo fiber contains micro bubbles, which gives the product thermo insulating properties.
- 
**SOUND PROOF**  
 Because of the sharp 3D inclined block face and the high density foam inside, the sound will be faded and consumed gradually during the rebound between inclined faces.
- 
**ZERO FORMALDEHYDE**  
 It's perfectly realized and certified to ZERO formaldehyde emissions by SGS.
- 
**FIRE RETARDANT**  
 The fire retardant performance reaches B in EN13501 and was certified by SGS. It also produces very low smoke, and it is the taste of bamboo charcoal after burning, not irritating.
- 
**BEND EASILY**  
 The panel embodies the professional wisdom when there is the circle or square column or the corner.
- 
**SOFT AND HIGH REBOUND**  
 The panel is composed of high density foam. Its high rebound means not ruffle, never deform. It has excellent effect of collision avoidance.

- 
**EASY INSTALLATION**  
 No board on the wall, and no nail during installation, just use adhesive to stick directly, free, easy and fast.
- 
**CAN BE APPLIED TO ANY SURFACES**  
 It doesn't require any preparation, the product can be applied directly to plastic, concrete, wood, painted or wallpapered wall with appropriate adhesive.
- 
**EASY TO CLEAN**  
 Thanks to the high quality textile leather coating, it's easy to keep the panels clean with a damp cloth or vacuum cleaner.
- 
**POSSIBLE TO INSTALL SWITCHES, SOCKETS AND LAMPS**  
 The panels are easy to cut, so that switches, sockets and lamps can be easily constructed.
- 
**JOINTS**  
 In contrast to the gypsum panel, the matching of MOPA panels are much more uniform.
- 
**HIGH ABRASION RESISTANCE**  
 The panels have good abrasion resistance due to the high quality PU coating, so they can be applied to places where direct contact reaches them. They are suitable for bed headboards, wall protector or decorating corridors.
- 
**CAN BE COMBINED**  
 Panels with different surfaces and colors can be combined with each other.

the panel types.

# Installation guide

**Step 1:** Make sure that the surface of the wall is clean. Square off the wall according to the size of the panels.

**Step 2:** Prepare the tool and material as seen on the pictures (extruding gun, solvent free contact adhesive). Apply the adhesive on 4 corners and middle on the back of panel. In all cases insert the panels exactly following the instructions of the particular adhesive.

**Step 3:** Apply the first panel on the lined top middle position, then go ahead with the neighbour panels by the same way. When applying on the wall press a little bit for around 15 seconds - depends on the type of adhesive - to make sure of no gap between. When the size of the wall won't match the panels, cut the panels by utility knife as need.

# Product cutting

Measure and draw the line by pencil.

Cut by knife and ruler.

After cutting.

## Tips & advices:

- The installation of the panels can be started from anywhere, but it's advisable to start from the bottom or from the top. Panels can be placed from center to edge, but also can start from one edge to the other.
- When there is outlet, measure the position on the panel and cut. Then put the inner box in the hole, cover the outlet.
- For lime wall, please paint with a coat of latex.
- In case of the panel was pressured, due to the memory foam it will resets to it's original form. The process takes as much time as the product was under pressure. For example if the panel was under pressure for 5 minutes, it will take 5 minutes to return to it's original shape.
- On the back of the panels arrow shows the recommended direction.
- During the panels installation it is recommended to work in thread gloves to protect the product.
